

Pathwaymix

Irwins Soft Path Gravels are graded from 8mm down to fine dust. When compacted the finer particles knit together to form a firm, yet porous surface. This is a SUDS friendly surface which will allow water to gently percolate through it. It isn't 'permanently hard', like a concrete, bitmac or resin surface would be. These self-binding materials can be dug out years after first being placed, crumbled and re-used. Soft Path materials are specially graded decorative aggregates. They are ideal for pathways, where a more natural appearance is desirable. They are extremely popular products for commercial or public applications where a simple, cheap, lowmaintenance, natural-looking pathway or trackway is required. They can be found on many golf courses, and they are widely used for Parks, Nature Trails and Bridleways. They are not suitable for an indoor application.

Agrablock

IRWINS AGRABLOCK is an interlocking porous modular grid system which is SUDS (sustainable urban drainage system) friendly. This allows the dispersion and drainage of excess rain and flood water. It can be infilled with gravel or planted out in grass to provide a porous, stable surface suitable for vehicular or pedestrian traffic.

IRWINS AGRABLOCK ensures that gravels of up to 20mm are retained within the cell walls, which stop them migrating. When planted out in grass it provides an ideal environment to thrive and the cellular structure helps protect the roots from heavy traffic. It provides a more secure surface for driving, walking or cycling over. It has a load bearing capacity rated 360 tonnes per m2, so will cope with practically any vehicular traffic that it is likely to encounter. IRWINS AGRABLOCK is manufactured to ISO 9001/2008. It is manufactured from 100% recycled polypropylene.

Technical specification:
 Dimensions: 500mm x 500mm x 40mm
 100% recycled polypropylene
 Colour: Black
 Suitable for natural aggregates and grass
 Manufactured in Ireland
 Manufactured to ISO 9001/2008
 Gravel per m2: 65kg
 Load bearing capacity >360 tonne/m2 / 3587kn/m
